

## INSTRUCTIONS FOR USE

MOLIN products are new generation dietary supplements in the form of drops, based on mineral additives, beneficial to the body (magnesium, zinc, iodine ...). They are enriched with biosignals of selected materials, which are imprinted by the MOLIT electromagnetic process.

Instructions for use: the recommended daily dose and the maximum daily dose are indicated on the label and depend on the type of food supplement MOLIN. The maximum daily dose should not be exceeded.

Shake it before using. Do not wash your teeth with a toothpaste five minutes before or after the drops, and do not eat food or liquid except water. Keep the drops in the mouth and swallow them for 1 to 2 minutes.

Food supplements are not a substitute for a balanced and diverse diet.

Keep out of reach of children.

## CONTENT

50 ml of the preparation contains water with selected minerals (in the appropriate quantity for the recommended daily intake) and ethanol (23%).

It does not contain colorants, preservatives, gluten, lactose.

Maximum daily quantities or the dose should not be exceeded.

## INSTRUCTIONS FOR USE

1. Before using

shake the bootle.

It is important for the body to take an even quantity of minerals and biosignals when

it comes to the ingestion of droplets. This is best accomplished by shaking, when we can also make sure that the colloid sediment is homogenized. In addition, the shaking additionally activates biosignals.

2. Push the appropriate number of drops directly into your mouth or in a (glass or plastic) glass with a little water (max. half a decilitre) or a plastic spoon.

3. Swirl and hold the fluid under the tongue (1-2 minutes), as the contents are best absorbed in the oral mucous membranes.

#### Footnote:

- If you are consuming several Molin foods at the same time, the time lag for ingestion between them should be at least 10 minutes.

### FOR OPTIMAL EFFECTS

- Rinse the mouth with plain water before swallowing.
- Do not wash your teeth with toothpaste and do not eat food or fluids other than water 5 minutes before taking the drops and immediately afterwards.
- Keep the drops in the mouth and swallow them for 1 to 2 minutes.
- Pay attention to yourself for a while whitening drops. Imagine how Molin drops have a beneficial effect on your body. Even if you take them without such additional attention, droplets will work, but with the latter you will achieve an even stronger effect.

### INTERACTIONS WITH MEDICINES

Food supplements Molin can be taken in parallel with medicines. Keep the drops and medication a 10-minute delay.

## WARNING

It contains alcohol. Droplets are not suitable for children, treated alcoholics, pregnant women and hypersensitive to alcohol.

## ACCOMPANYING RESPONSES

In individual cases, short-term accompanying responses may occur. Due to its established stressful patterns of action, the body can sometimes react with the impairment of symptoms (reaction) to the input of droplets. This is a good sign, meaning that the body has responded and it is actually in the beginning of restoring a balanced flow of life energy, which initially requires a change in the healthy life of foreign energy patterns.

Initial reactions (because they trigger a rooted state of stress and unhealthy energy patterns) can, of course, temporarily cause a deterioration in well-being, but this is only transient and at the same time is a symptom of effective droplets that stimulate the body and psychosis to restore the diseased balance. In this case, reduce the amount of droplets consumed by one-third. After slowing down the reaction, gradually increase the dose to the recommended dose.

## HOW TO KEEP

Keep in darkness away from sources of electromagnetic radiation (TV, computer, mobile phone, radio, computer ...) and between 1 degrees C and 25 degrees C.
